

INSIDER

Volume 19 • No. 4

November-December 2011

EVOLUTION OF THE REVOLUTION! **Wow!**

Most of today's largest companies are software ones, like Face Book, Linked in, Linux, Apple and a host of others that manufacture nothing. But they are software centric and distribute their product over the Internet or some combination of product and software.

"Over two billion people now use the broadband Internet, up from perhaps 50 million a decade ago" according to a *Wall Street Journal* article of August 23, 2011.

"Six decades into the computer revolution, four decades since the invention of the microprocessor, and two decades into the rise of the modern Internet, all of the technology required to transform industries through software finally works and can be widely delivered at global scale."

I was involved with the computer industry since the first microprocessor was invented and had the third retail computer store in the country at the time. I've followed this industry from day one and realized that the great companies of today are actually software companies and our engineers have also followed this pattern.

The *logistics* of upgrades have been our biggest roadblock on the REVOLUTION product as the need to protect our intellectual software has required a physical return of the product to us. As our product is now selling worldwide, the logistical

aspect of updating made us restrict our goals to once a year.

We had to write software that downloaded code from the Internet and scramble this code, so a high level lab or programmer could not

unscramble it and pirate what took us several years to write. While this sounds easy, why has no one else done it before in our small industry? Now we could license it without revealing our coding secrets and maintain the integrity of the coding. We would not want dozens of flavors on the market place if we had to maintain the code for others.

Some of the things we would like to add shortly are:

- 99 loco designations for assigning road numbers
- Change the direction arrows to F&R
- Have a serial single pair of wires to control up to 99 sounds, lights or accessories from your keyboard
- Allow chuff synchronization or auto chuff
- Allow cloning of tx's from your computer
- Indicate if the smoke is on or off on the screen

We have come across a technology that allows us to expand our growth worldwide and *takes away any restrictions on our product's growth that we envisioned*. We can now expand into other scales with a larger user base and not be limited to physical logistics.

The largest computer companies can update their products over the Internet and we thought that if we could do the same, we could have timely upgrades of our product conveniently downloadable too. We had planned for this and wrote the software programming ourselves to allow this to happen. We developed a download card to link to the transmitter and then the receiver cards will wirelessly link to the

(Continued on page 2.)

REVOLUTION *(Continued)*

sound card portion over our zigby-like network.

While several companies can download sound from the Internet, I don't know of any that can download the entire software package. This can be done by Microsoft, Apple, Linux and other operating systems, but not normally a hobby company. We spent six months writing proprietary software download code, that could not be ordered by us over the Internet. This will protect our proprietary coding and allow you 24-7 access to the software.

A light bulb went off in our engineer's head and he realized we were operating on a computer network now. It would be possible to distribute the upgrades wirelessly using a plugin card to a computer port and thus pass the new software to the devices *wirelessly*. Just as the regular signals control your trains, a signal could transmit the new software to your transmitter and receivers. The range would be the same as the system itself, which is normally 300 ft. and could be addressed in a similar manner as the trains.

Later, we hope to allow you to save your settings back to your computer, so you will not have to reprogram if you lose your coding or want to exactly recode another transmitter for simultaneous usage with a friend or club group.

To make legacy versions of the REVOLUTION system work with this new concept, you have to return your transmitter to us or see us at a show to have the upgrade done. All future deliveries as of the end of this month will have this new software included.

We intend to provide sound in the future and as we are not sound experts, we will want to upgrade or change your sounds as we make our sounds better. This wireless upgrade will allow this to occur easily and you will not have to open your loco to have this upgrade take place. It just has to be on a powered section of track to be alive and the loco I.D. will need to be selected to accept the upgrade.

This is not a future dream, but the technology we actually have working and will be part of the next production run of the REVOLUTION. We can give you special versions for special needs like switching and have a variety of options available in special downloads. Delivery has begun as of the end of September 2011.

Now we can add features as needed and you can download the latest version at will. We have a standard version or a pro version with some of the more advanced features that you have requested. If you don't like the current version you can go back to a prior version you're more comfortable with. The new version will be 2.07. (2.06 is not available as it was experimental.)

We also intend to open the system to 99 locos per group, so you can identify your loco by the last two numbers in the locos road number. You can have 1,000 locos available in one typical transmitter using 10 groups. Theoretically, there is no limit, but we think 1,000 locos in memory is sufficient for any layout. There is no time degradation no matter how many locos are in use, so we expect some competition to see how many locos can be controlled at once on a single layout in the smaller scales.

The REVOLUTION has been proven to be a reliable and accurate control system that is user friendly with a large screen for easy input of commands. Once the manual has been read once, we provide on screen prompts to enter new locos that have reminder command choices without referring to obscure numerical codes.

We expect to offer a basic version to introduce the newbie to R/C. It will be priced about \$50 for beginners and limited-needs users. I have a sample to show you, but it's not due out until the middle of next year. Our goal is to give a stepping-stone to beginners and hopefully they will soon request the full version.

The future is here and we expect the REVOLUTION to be one of the leading operating systems of the 21st Century.

Once you see it, you will want it!

REVOLUTION T.E. FEATURES

- 2.4 GHz worldwide universal frequency that is glitch free with each signal packet bound to the individual receiver.
- Either track or battery power.
- 1024 Steps of resolution for smooth operation.
- Easy Multiple Unit (MU) set up and dropping without re-binding.
- Each M.U.'s unit can revert back to single unit operation immediately after being dropped maintaining all original programming.
- Each M.U.'d unit can be set individually to equalize disparate loco operation.
- No program track needed.
- Changes to loco operation can be made on the fly, though it's safer to stop the train while re-programming to test the results.
- No booster power supply needed.
- Direction of loco shows on screen before operation begins.
- Battery power as well as track power.
- All decoders are R/F (radio frequency) and digital with 5 amp capacity continuous and 8 amp peak. The pin and socket combined allow this higher amperage along with the high grade mosfets and a huge heat sink.
- Two-way transponding communication between receiver and transmitter.
- Direct communication via radio waves to the loco eliminates track condition elements.
- All stop as well as individual loco stopping.
- Back lit scrolling LCD screen with all commands selectable on the screen.
- No CV variable commands to memorize.
- Short antenna of 1½" is easy to place in the loco and reception is top grade regardless of position of antenna.

(Continued on page 3.)

REVOLUTION *(Continued)*

- Transmitter has belt clip or can fit in shirt pocket.
- Control up to 50 locos and switches from the one transmitter without a base station.
- Future control of accessories through transponding signals as train approaches.
- Rechargeable battery connection in the Transmitter.
- Can use automated sounds via magnets and reed switch control.
- Has 6 outputs on board for sounds and lights and there is an optional board for 16 more controls.
- All programs stored in the transmitter, not the receiver, with signal packet commands sent 1,000 times per second.
- Battery life in transmitter up to one month depending on the amount of usage.
- Future routing of trains in memory including stops.
- Stationary receivers can control up to 4 remote switches. Can M.U. switches in groups up to 24 to change with one button push.
- Easy plug and play ports as well as loco wiring installation.
- Visual identification of locos by name and road number on screen.
- Speed indicator of loco on screen with 2-way communication.
- Short circuit and overheating indication of loco on the screen.
- Easy instructions enabled with screen selection choices.
- Long range of 400+ feet in most environments.
- No motor suppression required as our 2.4 frequency is not affected by motor radio noise.
- Silent operation without any motor hum. Frequency of 15 KHz PWC to keep the sounds above that of human hearing.
- Separate smoke control off board to compensate for the higher voltage needed in smoke systems. Each board can control two smoke systems.
- Transmitter sleep mode time set by user and awakes with the touch of any button.

East Coast Large Scale Train Show Fall Wrap-Up

Inclement weather failed to keep the crowds back as fantastic deals made for many happy attendees.

by Harry Hartman

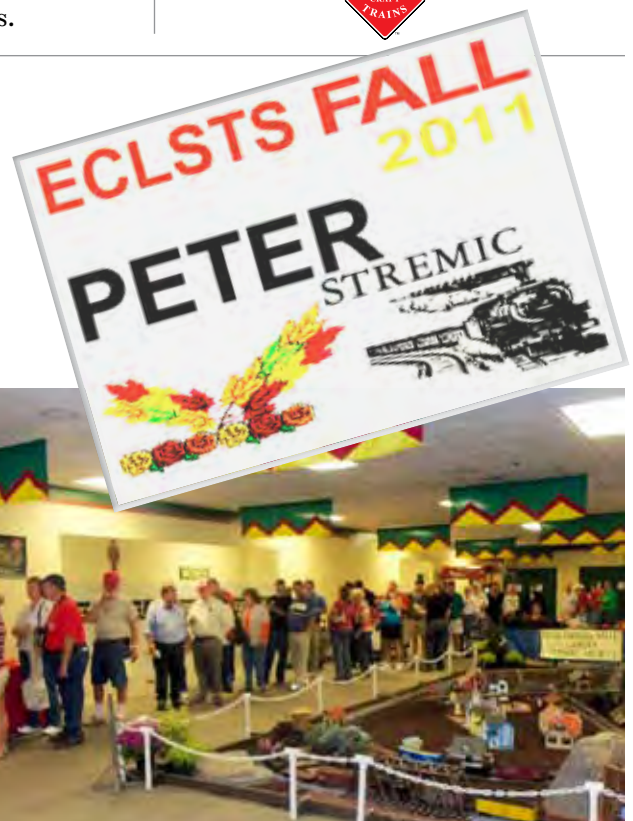

The 2011 Fall East Coast Large Scale Train Show is now in the history books. We had 40 vendors displaying their products for sale and three clubs displaying their layouts. The fall show's attendance was less than the spring show, down about 10% compared to last year's fall show. Even though the attendance was down a little, a lot of goodies were purchased and went out the door. While I was at the door, many times I would hear someone say,

"Just going to the car and coming back for more"—and they did just that. Several of the vendors were displaying new products. We saw several signs on products that said "Coming out soon." I am sure many of these products will be available for the Spring 2012 show.

I need to address a rumor that I had to deal with during and after the show was over. Several times during the show I had a few vendors and several people coming through the door with the same question: "We hear (or we understand) that this is the LAST Fall Show. Will you replace it with something else or just not have a Fall Show?" My answer

back to each of them was the same each time. "No, this is NOT the last Fall ECLSTS! We knew the economy was not helping the hobby and some of our vendors that always come to the Spring Show already had other shows scheduled during our show and could not come, so we decided to take the Fall Show "back to the beginnings."

(Continued on next page.)

The 2011 Fall Show was larger than the first few East Coast Large Scale Train Shows. The first few ECLSTS's at York had two seminar rooms and then the vendors and a display or two. I came to the second ECLSTS and remember the seminar rooms. Then they rented the second hall for the clubs the following year. Now as for the 2011 show, we knew the economy was bad and we figured our attendance would be down, but we had some new vendor requests to do the show and we had a couple vendors increase their booth size for this show. We have heard three different kinds of reports from various vendors, "we did not do well at all," "we did OK, and yes I heard from two vendors who said "We did BETTER than we did at the March 2011 show."

We have looked at the Fall Show and think it is a good show and think with time it can be as big as the Spring Show. Getting the vendors there and getting the public to come is a cycle that both parts depend upon each other or it will not work. You have to have the vendors there to sell their products so the public will come, and if the public does not come, then the vendors don't want to come. You can't have one without the other to make it work.

We always hear from people who tell us we need to advertise the shows MORE. That is all well

and good, but I don't care how many places we would advertise, we always receive phone calls or e-mails about the show, "Is this show open to the public?," "Do they sell any trains at this show?," "Where is this show?," and "Can children come to this show?" We try to answer each of those questions in all the advertisement we publish.

Occasionally we will forget to put a time or the GPS location of the Fairgrounds in one of the ads. Someone will ask why don't we place an ad on one of the Cable Company's or a network TV station in the DC/Baltimore area. Well, those ads are very expensive (several thousand dollars). We are trying to keep the costs down so we don't have to raise the prices for vendor space or general admissions. Sometimes the cheaper ad prices are for show times such as between midnight and 7 a.m.

The best form of advertising the show is YOU. Your encouraging your friends to come to the show and YOUR club putting up or passing out our show fliers at each of your open houses. You don't have to print out a color flyer—a black and white flyer that has the web address and/or phone numbers with the show dates on it would be a GREAT HELP!

I can't tell you how many times I have been shocked when I find a garden railroader that I have not met before and I ask them "Have you been to the East Coast Large Scale Train Show before?" or "Have you purchased a copy of *Garden Railways Magazine* or have a subscription to it?" In many cases I get the same answer, "No, never heard of it." Again, you passing out a flyer at your public showings will help us keep the cost down on the show and will be directed more towards those that might be interested in garden railroading. Those that are not interested, walk on by to begin with. A great tool we have found in our area is to take any back issues of *Garden Railways Magazine* that you are finished with to the doctors or dentist's office and leave them in the waiting rooms.

We have looked at our shows and looked at our Fall Show, we looked

at keeping it the same, we have looked at changing the format, but at this time we have decided to keep it the same. The ECLSTS's are the best shows you can go to and find G gauge trains and accessories and are the largest in the USofA. Not only is the ECLSTS a place you can go look for, touch, and see train items before you buy, but then you can then buy them at a great price. It is also a great social time for friends to get together to talk about your displays and things you have learned since you last saw your friends. After the show, many groups meet for dinner and in the lobbies of the hotels. These shows bring Aristo-Nauts together from coast to coast as well as from around the world.

I just got back from the TCA Fall Show. Stopped by the Aristo Craft Booth and saw the new Eggliner Annual and the paint samples of the 2012 Spring Show PCC's. They looked Fantastic and I'm positive that they'll be a sellout.

We are working on something "unusual" for the Fall 2012 show car. We are thinking about something we have not done before and it will be a freight car.

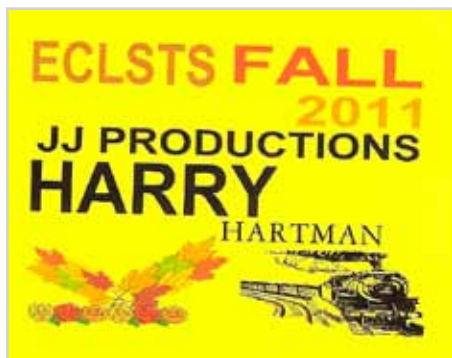

As for the Spring 2012 ECLSTS, it is looking like the show is going to be an early sell out of vendor space. Before we left the Fall Show, we had 3 checks in our hands for the

(Continued on next page.)

Spring show and two of them had requested MORE booth space. I have since received 5 more requests for additional booth space. If this keeps selling at this pace, we may have to expand the vendors hall.

We are looking for a full hall of vendors and with your help, lots of people to attend the show. Who knows, that new person you encouraged to attend the show or you met for the first time at the show, might have the answer to a question about your garden railroad empire that you have been searching for.

As the holidays approach, I want to thank each of you for your support of our shows, and the kindness/friendship you share with each of us at these shows. We will be back at you after the beginning of 2012.

Until then, toot-toot and *Happy Garden Railroading.* ♦

Garden Railroading is Family Centric

Dear All:

The day I first saw a G Gauge railroad in 1968 at the Nuremberg International Toy Fair in the train hall (D) at the time, I immediately saw the potential benefits for children being able to handle this size model train. Indeed, when talking to Wolfgang and Eberhard Richter; they explained they developed this size train when they were disappointed with the smaller gauges and the ability of their children even to get them on the track. To say these size trains were the hit of the Fair that year is an understatement. The Aluminum track and a complete starter set made this a Christmas gift super star and it was just the first step in a new dimension of model railroading.

My Father stated the look was due to a Narrow Gauge train on a standard gauge track along with an oversized rail and flanges for less derailment possibilities for children. While their vision was correct, their business model did not Fair well some 40 years later. That did not mean it wasn't a successful Family hobby and a couple of generations of people grew up enjoying this gauge.

The Fact that this a wonderful Family activity, where you can spend time at home makes this hobby a unique one. The teaching of a Father to his sons in how to envision a complete environment and making it work is a lesson that cannot be learned in school. Wives and daughters can feather the nest with figures, structures, vehicles and of course the look of appropriate plantings. Don't write to me about a few aberrations of this universality differences in the sexes, it's just instinct that hasn't changed in many thousand years.

The important point is that the Family together makes this Lilliputian World emerge, work and look great. I do think that battery operation, radio control, plastic track and remote uncoupling could make the hobby more user friendly and remove the frustration of electrical conductivity and dirty track on operation.

Yes, most of you have overcome these small problems, but how many have dropped out or not joined us to start with. The other frustration is having the layout on the ground, which is stressful for those of us that are senior citizens. I'm working on an alternative for the next newsletter, that can allow both chest high operation and scenic plantings at the same time.

My own grandson, Sebastian, picked up the use of the R/C transmitter at the age of 3 and gets the operation of a complete layout right away. The operation of more than one locomotive soon became a challenge that was a learning experience and a lesson that will not be forgotten. He still has to learn the name of the trains like he knows his Thomas trains and he'll soon pick up the importance of trains today and in our history. Is there a better way to learn?

Most of us have children and grandchildren that can benefit from this quality time together with you. Bring friends and Family over to your home for the holidays and spread the word about "Still Plays With Trains" and explain the benefits of model railroading. ♦

All the best,

Lewis Polk

2-8-0 CONSOLIDATION

1/29
SCALE

ART20600 2-8-0 CONSOLIDATION FEATURES: 1/29 Scale • Operating Smoke Unit • Can Motor Drive with Built-In Cooling Fan • All Drive Axles Gear Driven • 4 Patented Ball-Bearing Equipped Gearboxes • 3 Flywheels For Better Locomotive Performance • Operating Front Headlight • Operating Marker/Classification Lights • Moveable Cab Side Windows • Metal Drive Wheels with Electrical Pick-Up • Metal Side Rods • Blackened Solid Brass Grab Railings • Boiler and Cab Interior Detail • MU Plugs for Battery Hookup • DCC/RCC Compatible Socket in Tender • Front AAR Knuckle Coupler • Rear Drawbar for Tender

WHAT'S ALL THAT BLACK STUFF ON MY TRACK THAT I'M ALWAYS CLEANING???

One of the frustrations of model railroading is the cleaning of the track on a regular basis. Some of the cleaning is necessary from nature's effects, but most is from a questionable term, "Carbon Black." When the current leaps from the track to the wheel there is a spark that can be easily seen if you run at night or turn the lights out indoors. The spark result is a tiny deposit of a black dust that is the result of the spark's heat.

When I first began in this hobby, I was told this was the result of melting from the black plastic wheels in use and if I changed to metal wheels, this would dissipate. While metal wheels make a more realistic clacking sound when going over joints, the black was still there due to the sparking coming from the engines. We run a high current and voltage in G due to

the size and thus more sparking and blackening of the loco's wheels and the track. Yes, the metal wheels do clean the track somewhat, but it's the blackening on the wheels that really needs cleaning.

When locos come in for repair we have to clean them before analyzing the problem. Yes, we clean the wheels, but also have to blow out the dust inside the loco. You can do this yourself by utilizing the cans of air sold at computer stores to clean keyboards and dust from PCB boards.

I have not found a way to minimize this carbon black in 40 years of experimenting, but it doesn't happen at all when using on board battery power. Battery power is as clean as you can get and adds years to the life of your motor and electronics installed in your loco. Stalling of locos over dirty track causes much

trepidation over running trains and the solution is easy.

This is not the first time I have mentioned this and will not be the last. One infamous member of our forum, Marty Cozad, has bragged he has never cleaned his thousands of feet of track and this is a message we should all listen to. Many new people are cautious about electrical power out of doors, but use battery powered drills, hedge trimmers, lawn mowers, drills and a host of powerful tools that are the rule today, not the exception.

Please think about this and consider trying one of your locos on battery power and see how they perform. Also, buy two batteries, so that one is on charge ready for instant use when the first pack is used up. ♦

All the best,

Lewis Polk

Reflective Decal Film

Reflective stripes and lettering on railroad equipment has become the norm over the last 15 years and C.A.B. has developed a practical application for model railroads in all scales.

Our first series is for the Aristo-Craft BNSF and includes lettering, stripes and logos. A total of 3 sets are offered based on the engine (for use on BNSF Heritage I paint scheme on Aristo's GP 40 or the Dash-9), and BNSF Heritage II. Union Pacific (w/ or w/o wings) will be available this December.

For more information on our products, please call 631-968-8105 or E-mail at:

**Special Edition PCC Car for the
East Coast Large Scale Train Show
York, PA - March 23 and 24, 2012**

2011 Aristo-Craft Club Car

2011 Club Car • 2-Bay Hopper, Public Service

The **2011 Official Aristo-Craft Club Car** will be a 2-Bay Hopper with plastic wheels at \$50.00.* It's a Reddy Kilowatt Public Service car. You may add a metal wheel car set for an additional \$20.00 when ordered along with the car. We're only making two road numbers on this one, so there will only be two order numbers for the car and one for the special metal wheel car set at the special price.

The numbers are **ART41898C-A** and **ART41898C-B** and the metal wheel set only when ordered with the club cars is **ART29111C**.

These can be ordered online through the ARISTO-CRAFT Online Store under Club. As soon as you login to the Online Store, you go to the right hand side of the page where it says PRODUCT LINE. Click on it and go down to where it says CLUB ITEMS. Then click the SEARCH button. Please note that SHIPPING CHARGES WILL BE APPLIED TO THESE ITEMS.

The Aristo-Craft Railroad Club: A Bit of History Part 3

by Harry Hartman

Last issue we looked at the addition of the “Classic Line” as part of the ARISTO-CRAFT Trains Railroad Club. In 1998 the “Delton Classic line” continued as part of the ARISTO-CRAFT Club with the Wooden Caboose. This caboose was not one of the 4-wheel, 2-axel wooden caboose, but an 8-wheel, 4-axel, full-size caboose. This caboose came in the track maintenance service gray. This is a well-built caboose and came with metal wheels and interior lighting. This caboose does not have the interior that the ARISTO-CRAFT steel caboose has, but has all the exterior extras that you come to expect from ARISTO-CRAFT. It has lots of brass hand rails and grab irons. There are two lighted marker lights on the back of the caboose. There is a big red ARISTO-CRAFT Trains diamond is on both sides of the caboose. Two things I found interesting in examining the lettering on the Delton Classic Club Caboose are the repack date says Lub. Oilwell, ARISTO-CRAFT 11-4 97, Jersey City, New Jersey, and if you look at the car number it is 298. Thinking out loud... Could it be or mean the second club car for 1998? It is a very nice addition to the ARISTO-CRAFT Trains Railroad Club.

For 1/29 line in 1998 another first for the ARISTO-CRAFT Club. It was a motorized unit. It is a “lil’ Critter” Diesel Locomotive. As soon as it came I had it out of the box and on the track. It is a nice runner. Now I had something to pull my ARISTO-CRAFT Trains Railroad Club cars and with the 1/24 scale caboose, it looked like a great “Club Train.” I had fun taking this “club train” to some local club showings and had some questions about “Where did you get that train?” How many members joined the club by those ‘outings’ I still don’t know but it sure did create some great questions and some smiles. The “Lil’ Critter” was painted in the same grey coloring and had the big red ARISTO-CRAFT Trains diamond on each side of the engine. This Lil’ Critter was labeled as Track Maintenance Service. The engine number was number 98. Thinking out loud again, one could guess that it was for the YEAR. You can find the ARISTO-CRAFT Trains built circle at the bottom of the short cab to the left of the headlights. It is almost resting on the walkway.

As in the previous years, you received a membership card with your unique membership number, a catalog, and a membership certificate signed by Lewis Polk. The membership forms were always found in the catalogs. The 1998 ARISTO-CRAFT Catalog became a 2-year catalog in 1998. It was labeled 1998-1999. The cost of each of these memberships was \$60.00 each. You could buy what was called a *Gold Membership*, which was both memberships, 1/29th and 1/24th. (see form on next page). The shipping boxes continued to be labeled with the ARISTO-CRAFT Trains Railroad Club, so there was no doubt what the UPS man was bringing you! ♦

THE 1998 ARISTO-CRAFT RAILROAD CLUB

You Can't Get These Great Items Unless You're An "Insider"!

MEMBERSHIP INCLUDES...

- EXCLUSIVE COLLECTOR EDITIONS OF ARISTO-CRAFT TRAINS.
- A SPECIAL MEMBERSHIP CERTIFICATE AND CARD WITH A SPECIFIC NUMBER ASSIGNED ONLY TO YOU.
