

ARISTO-CRAFT INSIDER

VOL. 20 - NO. 3

MAY - JUNE 2012

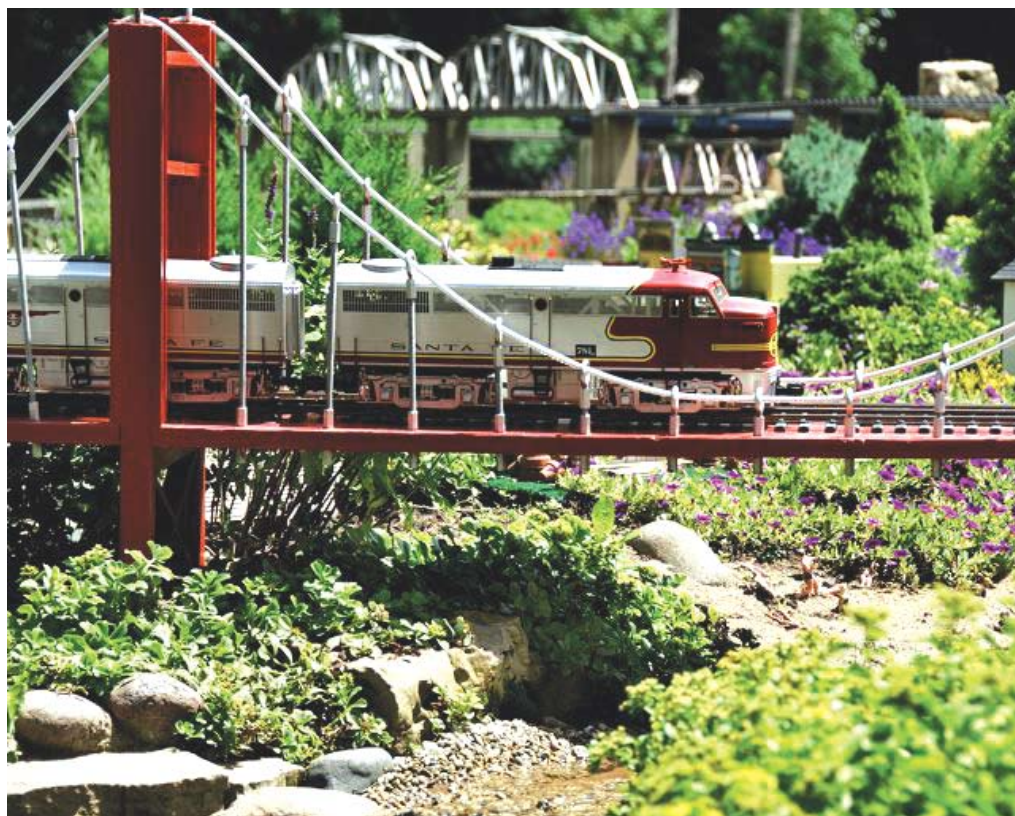

YOUR GUIDE TO RETIREMENT AND TRAINS

Today, most people live longer in retirement than they do working. Some people can retire early after 20 years, such as in the military or police and fire departments. The classic 65 years is inching up a bit, but most people will live some 20 years longer in retirement on average.

We all need something to do each day to keep our minds sharp and have something to look forward to. Garden trains is one of the few hobbies that can be done at home and does not require a car trip to enjoy the activity. It's still an activity that your spouse can enjoy with you and she always knows where you are. You can spend as much time on the hobby as you wish and can spend as little as you wish.

Here are some tips to help you get started in garden railroading:

How you control your trains is an important first step to consider. There are very complicated electronics you can use or basic simple ones. You can also use elaborate switch design layouts and simple loops for easy running. A functional control system will

help make your day in the garden easy and fun.

Your layout can be a draw for the entire neighborhood and certainly for your grandchildren and your own family. I have a close friend that posts the hours he will be running daily and always has a crowd of kids and adults waiting for him to start running. You don't need the formality of scheduled runs, but it does add spice to

the day knowing you have a fan club looking forward to your train running.

In Las Vegas, almost everyone I visited had elevated layouts with blocks holding in the soil about 3' from the ground. I have suggested using show style tables that can be covered with tarps and then covered with soil over it. I have written before about having your

(Continued on page 2)

FAX 973-351-9700

WWW.ARISTOCRAFT.COM

YOUR GUIDE TO RETIREMENT AND TRAINS

(Continued from page 1)

layout elevated, as standing up from getting our trains on the track can be hard.

Florals can be done in pots, so they can be moved indoors in the winter or changed according to the season. Pot gardening allows you to rearrange your layout and have a different look for visitors and to keep your interest high. You can also have different looks for different locals, such as desert scenes, snow scenes, western scenes and a bevy of other looks depending on the era and location of the railroad you might be designing.

Battery operation is an optional choice if you are not comfortable with maintaining track connectivity and protecting power packs out of doors. You can keep powered layouts protected by leaving the power supply indoors and just run a pair of wires outside. Battery power lets you run reverse loops and is simpler in general wiring. However, you will need to remember to charge your batteries daily and keep a second set always on charge to change at a depleted set.

You can have a lot of fun decorating the layout with collectible cars, figures and houses typically used by most layout buffs to add reality. Die cast cars are abundant and run in price from a few dollars up to a hundred dollars. I recommend stabilizing figures by gluing them to large washers that can be shallowly buried in the soil.

Bird feeders, water events and fish ponds can all add character to your layout and provide a balance of activities enhancing your layout fun. No two layouts are alike ever and you can keep evolving your layout to keep you and your visitors further interested in how your layout is evolving.

A good roadbed is essential to keep your track level, but can be accomplished in many ways. My choice is to use paver bricks carefully laid over a bed of gravel; However, if you live in a northern climate you assuredly will have to re-level each spring. We recommend rail clamps, especially on curved sections and on all switches allowing for easy removal for service. Switches should be lathered in rubber cement to keep water and grit from entering pivot points and gearing inside the switch machine.

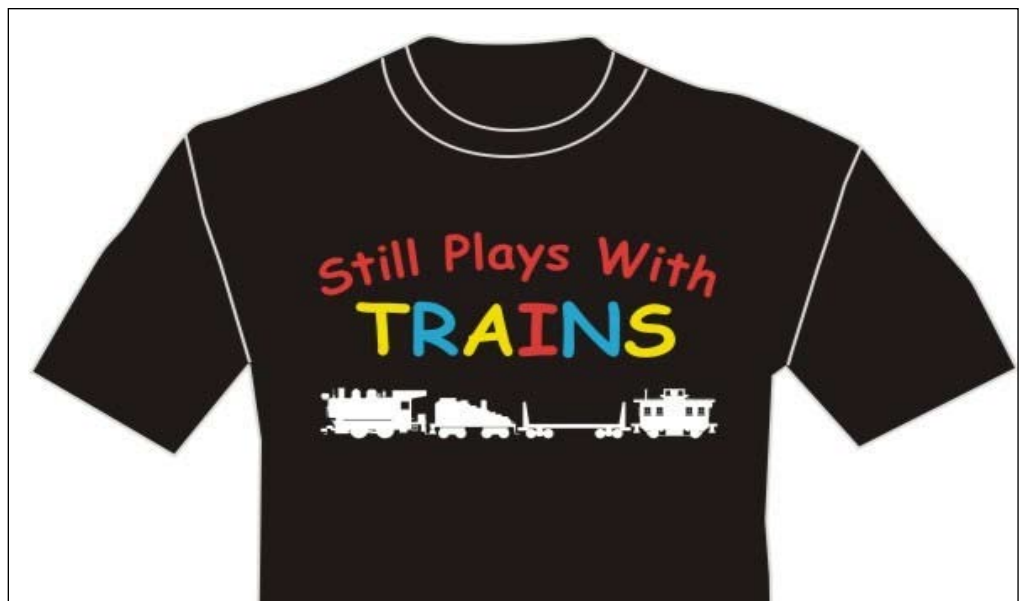

Radio control makes sense as you can drive each train independently

as if you were in the engineer's seat and you can bring more realism to your operations. The most fun is to keep several trains in a single consist operating all simultaneously with one control option. Long trains can be run with several locos and some pushers either in the middle of the consist or at the end, all synchronized as on a combined train consist.

Have people come to your layout once a week or run trains daily at a specific time. Tell them how you made the layout and talk about the trains on your layout. Discuss a different aspect every time and make the get-together an informal club, and ally with a larger regional club. We'll provide a free "Still Plays with Trains" hat for those of you that let us know you are doing this as an ambassador of the hobby. Provide a link to your post for confirmation of your effort.

We will have a new downloadable Internet color catalog and web site

(Continued on page 3)

"Still Plays With Trains" - Wear it proudly!

YOUR GUIDE TO RETIREMENT AND TRAINS

(Continued from page 2)

soon for you to use.

In real life, most types of cars, locos and road names were mixed, but you might want to keep eras and scales in similar consists. There are narrow gauge trains that original ran on 3' gauge tracks and more modern trains that ran on 4' 8" gauge track. However, in reality, the gauge of the trains and track allows either scale to run on the same track. G gauge means garden gauge and you can mix trains on the same track correctly. It's as much fun or

as serious as you want to get as it's your railroad to design as you wish.

Keeping up top date with blogs where you can post pictures of your layout or photos about new purchase items help fill nighttime hours and you can "friend" others about your doings on the layout. So, day or night you will find an outlet for your creative juices.

Advertise your layout on Facebook. Here's a suggested copy idea:

"Learn about the world's greatest hobby, Model Railroading, and more specifically, Garden Railroading, combining two great pastimes for your retirement.

It's a home-based hobby and can be of interest to the whole family. Be a hero to your grandchildren when they come to visit and participate with your wife and children with the garden and decoration aspect of the layout."

NEW ARISTO-CRAFT UPGRADES

Most new production for 2012 will have a new shaped wheel in both diesels and steam locos. The flange has been modified to a smaller depth and the radius is narrower, too. Making massive changes to every wheel set was a large job and we had to do the drawings as well.

All locomotives now have a pass-fail test for the gauging of the wheels and our new internal collet to hold wheels in place will be used on most locos using our patented gearbox.

The next run of the Consolidation will have a new wheel with a smaller flange for improved operation on code 250 track, while working as well with code 332 track. We will bring in these newer wheels for replacements when the production of the Consolidation is ready.

*Improved wheels for the Aristo-Craft Consolidation
- One of the new product upgrades for 2012*

The 0-4-0 will have new wheels and a new gearbox using our patented gearing system. The tender will have a Revolution port and the operating switches easily accessible in the tender. There is a new flickering light in the loco's firebox to simulate the burning of coal.

We will make a high nose SD-45 and bring in some blank high nose plastic pieces for people looking to

scratch build other versions of this loco.

We are making an ore car and will have test shots available in the next few weeks. Of course, we will need to do the artwork for the production names we are using, but need the test shots to make sure the placement of the artwork is accurate. Each car needs different pad plates and

(Continued on page 4)

NEW ARISTO-CRAFT UPGRADES

(Continued from page 3)

our graphic designer, Michael J, does where the placement is designated. So it's not just the paint colors and graphics, but also the specs for correct placement of each graphic. We give complete drawings to the factory for the design and placement of each pad print, so the artwork has total control by us and great production skills at the factory.

Of course there is the Revolution with sound that is coming soon. We will have a generic diesel and steam sound selectable on the screen and later specific sounds for specific locos downloadable from the Internet. We had to develop a new screen as the former maker went out of business and duplicated the old version exactly. The Revolution continues as a most reliable way to run garden trains by either track power or battery power.

Our new Internet Store is working well with great graphics and reliable e-mail notifications of receipts of orders and shipping details.

We have upgraded all lighting fixtures and bulbs in our NJ warehouse/office for energy efficiency and that's for all 30,000 square feet. It was a big job, but it's all done now.

Most of these upgrades were begun at least a year ago or longer, but changes like the wheels for the steam locos took all new tools. They had to be designed and tested carefully

The Revolution will come with interactive sound effects in 2012

to ensure the continued great running characteristics of our product line.

All in all, we have made adjustments to keep Aristo-Craft the favorite product line for thousands of our fans in G Gauge trains. Making massive changes to every wheel set was a large job and we had to do the drawings as well.

ELECTRONICS TODAY IN ARISTO-CRAFT MODEL TRAINS

When we started in manufacturing, designing a board required a hand-drawn method on a draftsman table. Any changes had to be done by eraser, changing the penciled drawing or putting layers of paper over the main drawing to show the changes.

After a board was designed and samples made, you had to have people hand insert each part from bins of parts in front of the assembly worker.

Each assembly worker would do a small section of the board, so that they could remember the few parts they needed to insert instead of one person doing the entire board. Usually these were single sided boards and nowhere as efficient as the double sided boards of today.

After all of the parts were inserted, you had to put the board through a grinder that took off the extended insert remainders. Then the entire board was put into a lead bath that floated the boards though a large pool of solder that melded the parts to the boards. It was important to keep this pool of lead clean or the imperfections would show up in the solder joints thus causing troublesome faults. After this process came testing and looking for bad solder joints and misplaced parts that were inserted incorrectly.

(Continued on page 5)

ELECTRONICS TODAY IN ARISTO-CRAFT MODEL TRAINS

(Continued from page 4)

This whole process was very problematic and had a high percentage of failure. However, it did bring microchips and other such supplementary parts into products that needed such controls. It was a tremendous advancement of manufacturing and brought us into the 21st century of product design.

Today, the boards are designed on a computer and the flow of electricity and commands can be pre-tested in advance of making samples. If there are changes, it's easy to do so on the computer aided software, rather than the hand-done drafting.

Sample boards can be made in a few days and tested before production. Instead of the hand insertion and solder baths, we have what are called "Pick and Place" machines, where all parts are on reels that are auto-fed into machines that place all of the parts along pre-applied glue strips that hold the parts in place initially. A computer programmer is needed to tell the machine where to place each part and how many of them are needed for each location. Still, the machine can replace hundreds of hand insertion and solder workers and do so in a relative blink of the eye. Usually, there are 20 or more boards made at once as a single sheet and then snapped off for the individual use in a product. The boards are then put through a heating tunnel, where the parts are strongly glued to the boards in a permanent attachment.

The electronic circuit board assembly line at the Aristo-Craft factory, from Aristo-Craft's DVD "How Model Trains Are Made."

Afterwards, each board can be put in a test jig, where all parts are tested to confirm correct operation. Quite a miracle and in our field we can make all the boards needed for a year finished in a single day. Larger production can be done on a daily basis and more functionality can be programmed in the chips by ever faster and larger memories for increased product capabilities.

Aristo-Craft has it's own electronic engineer that designs our boards and programming as well and we reflect changes in technology in almost every run of the product. You can see this process in our video "How Model Trains are Made" ART90010 and it's available in our Internet shopping cart.

The Revolution product was made

to maximize the use of the new electronics available as a remote control device in either track or battery power. It was a careful plan that allows most control functions to work in unison using state of the art electronics. This was not a reverse engineering project, but was a revolutionary concept that was designed and planned by us totally. The manufacturing of this product is also made by us directly and we have an extremely low level of production problems.

It's a better world for manufacturing, though not necessarily less expensive unless you have a product that can be made in exactly the same way each and every day. Short run production is higher in quality and more expensive as well.

SPRING 2012 ECLSTS WRAP-UP REPORT

by Harry Hartman

March 23 & 24 were two exciting days in the world of G Gauge Trains. It was the 18th East Coast Large Scale Train Show. You could feel the excitement in the air when we arrived on Wednesday and went over to the Memorial Halls to see if the hall was ready for the arrival of all the vendors and clubs on Thursday morning.

When we got to the hall, there were already two trailers on the west side of the halls (two clubs) and one vendors trailer and one truck on the east side of the halls. We got the halls ready and left for the evening.

When we got to the hotel, as soon as we got out of the truck, there was someone unloading their luggage from the trunk of the car.

I saw this person look around from behind the car and I heard, "Mr Hartman? Harry, is that you?" It was Ivor Snoddy from Northern Ireland. What a pleasant surprise. I don't know who had the bigger smile, Ivor or me. He was excited about the show and brought me greetings from another Aristo-Craft Forum member "from across the pond," Alan Lott.

We saw several more people that we recognized from previous shows. It almost seemed like a family reunion.

Thursday was spent watching the show come to life. It is always exciting to see the empty hall become full of "Garden Railroading Goodies." This year we had several new vendors and one new club. I heard several comments about the Pocono's modular supports. The ECLSTS has both sides of the hobby at this show. When you go to the display side, you can see the trains

Aristo-Craft Forum Members and Lewis and Scott Polk pose for pictures at the 2012 Spring ECLSTS

running in many different backdrops and then you can go to the vendors side and buy much of what you just saw.

There seem to be some 'before the show' jitters about if people would come to the show and also if these same people would buy.

The attendance was down about 5% over last year, but from what many of us saw going out the doors, and what several of the vendors told us, the people came to buy.

Not only were there some great bargains, there was also several vendors showing their new projects. Many have posted pictures of new products and different scenes from the show on the Aristo-Craft Forum for the East Coast Large Scale Train Show.

The Spring 2012 show had several great seminars. From the comments I had heard, they all were great seminars. A couple of the seminars I was asked to put out some additional chairs, so sounds like they were well attended. I was able to sit in on Scott Polk's Q & A session. Many of the questions given to Scott were about the future of Garden Railroading and Aristo-Craft Trains. Scott said Aristo-Craft was in G Scale for the long haul. He talked about the S1 pushed back to 2013. Aristo-Craft plans to produce many in a lot of road numbers. Consolidations are on order. New Connie wheels on order. 20% Price increase 4/1 passed through from China. Center Cabs will be run again. Some streamliners will be

(Continued on page 7)

SPRING 2012 ECLSTS WRAP-UP REPORT by Harry Hartman

(Continued from page 6)

produced 2012, probably in sets. Plans to replenish stock, "if molds are done, why not use them." New, advanced, better than ever website rolls out around 4/1/2012. Will include database and forum. No current data/information will be lost. When asked about cheaper starter sets to sell to toy stores, he said no, and that there were other companies that had great starter set. New 0-4-0 due out, completely reworked. When asked about a new caboose, he said yes.

After talking with several of the vendors and looking at the economy and the price of gas, we decided that it probably best if we cancel the Fall ECLSTS for 2012. We are not closing the door forever on the Fall Show. Just for 2012, we will NOT have a FALL ECLSTS. We wanted to make sure we could provide the quality of a show you come to the ECLSTS for. Make sure you cancel any room reservations you may have made for the September 2012 show.

We are busy planning for the 2013 Spring ECLSTS. The dates for the 2013 ECLSTS are March 22 & 23, 2013. We will be receiving suggestions for seminars for this show as well as suggestions for presenters too. We are looking through the suggestions for a show car for the 2013 ECLSTS. I will tell you we are looking at a freight car with two different road numbers. Watch the forums for the announcement of what the 2013 car will be. So save your pocket change. I cashed my pocket change in for the March show and in one years time, I had saved almost \$400.00.

Scott Polk of Aristo-Craft Trains giving a seminar on Saturday at the ECLSTS

As I always say, YOU are the best advertisement we could have for the shows. I had one club tell me that they put in an article into their local newspaper with a photo of their group and told about attending the show to display. They picked up 4 new members. Many times I have sent articles to newspapers in the York area and articles to some of the larger cities about the train show. Almost every time I get a phone call from that newspaper wanting me to take out an ad. I would tell them no and then they said they could not print my article because they considered it an advertisement. The local newspapers do not consider it an advertisement if the local

club puts in an article about the club and what it is doing, such as attending the ECLSTS as a group or displaying at the show.

So in closing, we at JJ Productions would like to say THANK YOU to all that attended the 2012 ECLSTS. We would also like to thank the vendors and clubs that took part in the show. It is always great to renew friendships at these shows. As stated above, and posted on the forum, it is more than a show, it is almost like a family reunion. Have a great summer, and hope to see you at the 2013 ECLSTS.
