Join Our Team!

Why Team Large Scale?

Great partnerships have flourished throughout history, from Peanut Butter and Chocolate to Batman and Robin.

And we're proud to introduce another dynamic duo; St. Aubin and Large Scale Online (LSOL.com) have combined forces to create **Team Large Scale**.

So you're probably thinking, okay, that's nice. But what's in it for me? The short answer is plenty. Just consider what goes into this exciting new partnership:

- St. Aubin is the best place to find products in stock on sale, with great customer service.
- LSOL.com is the place to find up-to-date news and information on the world of Large Scale Garden Trains.

Put them together and what have you got? LSOL.com informing you about all of the latest products you want for your railroad - and St. Aubin delivering them at a great price, with impeccable customer service.

BTW - I am not one that usually pays for access to web sites. But, I have to say I find your site valuable and worth the money I am paying for the access. Especially being able to have access to all back stories for the price. I also want to say that you increase the value with the exclusive announcements. I am glad I joined.

Kevin Lepel

Why be part of the team?

You could have saved over \$1,000 dollars on your purchases just in the last three months alone!

You could have received a weekly news update and would have had access to thousands of articles and product videos.

You could have received help from fellow members of Team Large Scale through our Online Workshops and Live Chat sessions.

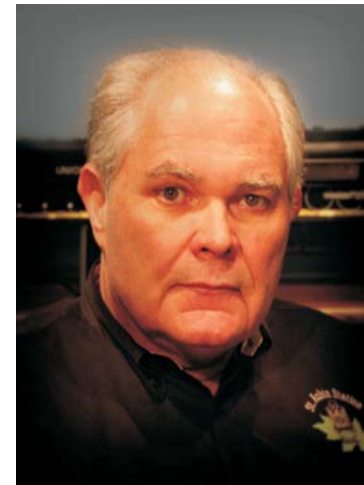

It is the only way to get St. Aubin's special prices, special offers and exclusive custom products. Team Membership has it rewards!

How to be part of the team?

Go to www.TeamLargeScale.com. Use the code TEAM2009 and save \$10.00 off your yearly membership.

TeamLargeScale.com

Switching Tracks...

Beginning with the next issue of Garden Railways, St. Aubin will no longer list our selling prices, item by item. In reality we were devoting a great deal of ad space to display information that was rarely accurate.

Readers may not realize that our magazine ad is finalized two months before a copy reaches the hobbyist. During that time pricing fluctuates with little or no warning. Fuel costs and currency exchange rates drive some prices up, while OEM dealer specials and the competitive spirit

drive other prices down. We then find ourselves in the awkward position of having to explain to some callers why an ad price is too low, and cannot be honored. At the same time other ad prices are now too high with the readership totally unaware of those bargains.

Anyone who has made it through Accounting 101 knows inventory is valued and priced based on replacement cost, not acquisition cost. Consequently, the dynamic nature OEM dealer pricing affects everything we have, not just what we are about to buy.

Web technology allows us to adjust pricing within minutes, and as often as necessary. The Point-Of-Sale database used by our stores can be updated with equal spontaneity. You will be better served by obtaining the most current pricing from our web site or by calling your favorite sales representative at either of our stores. We will make sure that it is well worth your effort to do so, because, at those venues you will benefit from the most accurate and lowest possible pricing available at any given moment.

If you don't have the time or inclination to call us or surf our site just to see what is on a super sale, don't fret. We can take the worry out of saving money. Team Large Scale members enjoy the option to receive an email alert the moment there is a new opportunity to save on a popular product. Team Membership has its rewards.

Don't forget our "Lowest Price Pledge." By displaying pricing in a dynamic environment we are better positioned to honor that pledge.

Thanks for your support,

Jon Simich
Director, Train Store Operations

Lowest Price Pledge

Our new Lowest Price Pledge is simple. We pledge to beat any advertised "Total Price" for any item we sell. Total Price means your cost for the item plus the shipping cost to get it to you. We make this pledge on any item you see in a print advertisement or on our competitors web sites. If they have the item in-stock and ready to ship to you that day - contact us and we will beat that Total Price. It does not get any easier than that. St. Aubin has also instituted a new single-level pricing structure. The price you find on an item will be the same in our stores and on our all new web site.

LIVE STEAM 0-4-0 LOCO

1/29
SCALE

Aristo-Craft Trains is proud to introduce the Live Steam 0-4-0 Locomotive, its long-awaited follow-up to the very successful Live Steam 2-8-2 Mikado Locomotive. This new small-size live steamer will come in a metal carrying case, much like the Mikado, and will be fully accessorized. The Live Steam 0-4-0 includes the same built-in, ready-to-run R/C system as the Mikado and will operate on small layouts, even with a 4' diameter curve.

Running live steam is a thrill, re-creating how real steam trains ran. Aristo-Craft has made the operation of its live steam engines more friendly, with a Piezo auto-start flame without matches. With the included R/C system, you don't have to chase the live steamer to control it. The Aristo-Craft Live Steam 0-4-0 has insulated wheels, so it can run on the track along with track-powered trains. It doesn't have to run on an elevated layout, unlike other live steamers, for control access for the train.

The Aristo-Craft Live Steam 0-4-0 will be a wonderful addition to everyone's collection and lots of fun to operate. It is a limited edition item, so make sure you order soon! Delivery is expected October 2008.

LIVE STEAM 0-4-0 FEATURES:

- An integrated radio control system for forward speed control, reversing, and to activate several sound effects. This R/C system operates on the universally accepted 49 mhz frequency and is FCC-approved in the U.S.
- A well for a warm water bath for the Butane gas.
- Auto-ignition for the flame using the tender control panel.
- Easy-to-use-and-find butane fuel.
- Wide-mouth oil access. (Oil not included)
- D.C. electric motors for radio-controlled reverse and speed controls.
- A wall charger.
- A NiC_d battery pack to operate these electronic functions.
- Includes tools such as two syringes for filling and removing the steam oil, a metal funnel to fill the boiler and Butane bath, two metal screwdrivers for the live steamer locomotive adjustments and others.
- Additional mechanical boiler functions to make maintenance as easy as possible.
- Insulated wheels for running on electrically powered layouts with other locos.

Sectional or Flex
track, what do you
like better?

We asked Team
Large Scale members
what kind of track
they preferred,
Sectional or Flex
track.

We used 5 foot brass
sections from
Aristocraft. As far as
curves go I used the
single railbender from
Aristocraft because that
was the only type
available at the time.
Now with the dual
bender available, it sure
would have sped the
process up.

John Pletcher

I am using both
sectional and flex track.
Sectional track is faster
to install but there are
less joints with flex
track. Also, I used the
sectional track as a
prototype to get the
same radius with the
flex track.

Glenn Habrial

In 1986 I started with
sectional and then
relaid the railroad as 5'
lengths became
available. Eliminating
many rail joints
improved reliability and
stability of the track
structure.

Don Sweet

5 Things: What is better now in Large Scale Garden Trains?

We asked Team Large Scale members what are the 5 best improvements they have seen in the industry.

Things are better since 1984. A growing variety of 3' gauge, 1:20.3 scale items. A better selection of American prototypes, powered and rolling stock. Track styles and more prototypical sizes. Control systems, track and remote control. Accessories including structures, figures and details.

Rick Henderson

We have come a long way! -Wider radius switches (thank goodness!!) -More North American prototypes -wide selection of motive power -More choices for buildings -More choices for accessories -Choice of brass or stainless track. Things are good!!

Paul Roberts

The best improvement to me has been in detail/quality. I also like the increase in number of American prototype engines and cars.

Chris Wolcott

Years ago I began my St. Aubin life, part time while in high school, helping my Dad create the company advertising in this very magazine. During college breaks I often worked at installing digital sound in customer's locomotives. (Those will be the units still working flawlessly today.) When Dad passed away I returned to the business briefly to help Jon and Val with the transition. Having graduated NIU, I have now rejoined St. Aubin full time, and for the long haul.

My focus is on the future. How can we improve product selection, pricing, and quality? What will the best customer interactive environments look like in two, five and ten years? How do we entice a younger buyer to embrace this hobby? The formation of Team Large Scale is our initial step on that journey, and it is a big one.

Now and in the future, customer service is one item we do not sell. It is provided free to everyone, even those who may only need a question answered, or to vent a bit of frustration. You, the hobbyist, are our most important asset, and the most difficult asset to replace. We get that. If you experience anything less from us I want to know, personally.

Thanks for reading this, and have a great 2009!

Jason Sullivan

Baldwin VO 1000 Diesel Locomotive w/Proto-Sound

The distinctive VO-1000, perhaps the most muscular looking of all first-generation diesel switchers, was Baldwin's most successful product. The U.S. military and over 30 class one railroads bought 548 copies of the 1000 hp.

DCS Remote Control Set

The DCS Remote Control System allows you to leave track voltage constant and control multiple Proto-Sound-equipped engines individually. A single DCS Remote handheld will allow you to control Proto-Sound locomotives in command mode.

GG-1 Electric Engine With Proto-Sound

If there were a Locomotive Hall of Fame, the Pennsylvania Railroad GG-1 would surely be one of the first inductees. Built from 1934 through 1943, the GG-1s' stats were superior to virtually any locomotive of their era, and they still look impressive today.

2-8-8-2 Triplex Steam Engine w/Proto-Sound

P. T. Barnum would have loved the Triplex. It was an engine of superlatives: more drivers than anything before or since, too big for the shops of its owner, the Erie Railroad, powerful enough to pull a train nearly five miles long.

MTH - RailKing One-Gauge Trains

DASH-8 DIESEL LOCOMOTIVE \$379.99

This rugged American prototype is sure to please garden railroaders in a variety of roadnames. Available in the markings of Amtrak, Santa Fe, Chicago NorthWestern, Norfolk Southern, and Union Pacific, these highly detailed 1:32 scale models provide realistic operation and the long list of features shown.

- Detailed Polycarbonate Body
- Authentic Paint Scheme
- Metal Wheels and Axles
- Operating Knuckle Couplers
- Interchangeable Hook & Loop Couplers
- Constant Voltage
- Directionally Lighted Number Boards

The microprocessor in the Dash-8 prototype recognizes if the engine is overheating while in a tunnel, as opposed to a malfunction on the open rails, and allows it to keep operating a full power for ten minutes, so the crew doesn't find itself stranded in a tunnel.

4-6-6-4 CHALLENGER LOCOMOTIVE . . \$1049.99

The Union Pacific designed and asked ALCO to build the best high-speed simple articulated engines to grace American rails in the midst of the Great Depression. The 4-6-6-4 Challenger first appeared on UP rails in 1936, and it was clear from the beginning that it could handle tremendous tonnage at high speeds. Though the Challenger was initially designed for freight use, UP also put it into passenger service, and it proved itself capable of handling any task it was given. The railroad was so pleased with its performance that it ordered more of the 4-6-6-4s over the next several years.

- Die-Cast Boiler and Tender Body
- Die-Cast Metal Chassis
- Authentic Paint Scheme Metal Wheels and Axles
- Constant Voltage Headlight
- Die-Cast Truck Sides
- Remote Controlled Proto-Coupler
- Metal Handrails and Decorative Bell

UP claimed the Challenger let them maintain freight speeds 55% higher than in 1928, when they began the design experiments that led to the 4-6-6-4.

What about using batteries on your Garden Railroad?

We asked Team Large Scale members what kind of batteries they use.

Started out simple with a pair of 7.2 volt NiCads. They still work rather well. Later, I found some 9 volt NiMH batteries. I found they not only had more power but seemed to last longer before needing a recharge. I also found a couple of sealed lead acid 12 volt units. Run and charge time were OK but they were heavy and took up a lot of space.

Mike Evans

The ALF Railroad has only one battery-powered loco at this time; sound, battery (14V Li-ion) and RC all inside the locomotive. Run time is two to three hours with several cars with metal wheels on our layout which is mostly grades up to 3%. It takes less than five minutes to change out a depleted battery pack with a fresh one. The depleted pack will recharge before the replacement pack runs down.

Geoffrey Cullison

NEW PIKO G-Scale Starter Sets!

1038101 - NYC Freight Starter Set

1038100 - UP® Freight Starter Set

1037100 - DB BR80 Starter Set

Each of these Made in Germany Starter Sets includes a powerful 0-6-0 steam loco, authentic 4-axle freight cars, a big 4' circle of PIKO-G brass track and a safety approved power supply - everything needed to be up and running in minutes. And PIKO-G trains are made from UV and weather-resistant materials, with sealed gearboxes and precision can motors to give years of enjoyment, indoors or out. With so many premium features, you'll be pleasantly surprised at the affordable price.

PIKO Quik Kit buildings come partially assembled providing beautiful results in virtually no time. Windows, doors, signs and details are already installed. A unique "pin" system joins each building together in minutes and allows easy breakdown for storage.

How did you start
with buildings
on your Railroad?

We asked Team
Large Scale members
what the first
building was on their
railroad.

My first building was a
PIKO station that I
ended up kitbashing. I
turned it into a replica
of the Patterson House.
It was a combined
station, hotel,
restaurant that served
an overnight stop on
the PRR between
Philadelphia and
Pittsburgh around 1900
before the "birth" of
Altoona. It still ranks
with the toughest
projects I've undertaken
- probably because I've
learned a lot since then.

Bill Rohm

My first and still favorite
real "G scale" building is
the Grizzly Flats
Passenger Station by
Piko. I love it's looks
and colors and it is still
holding up after 6 years
of being carried inside
and outside a lot. I
actually started with
about 17 different
cheap birdhouses
because my wife adored
them. Surprisingly they
have survived and are
all still around the
railroad.

Al McEvoy

5 Things: What should you do before you start your railroad?

Here is just one of the great answers from the many posted at Team Large Scale.

1 Find your area. Claim some land and shape it the best you can to make it work for your master plan.

2 Go BIG. Lay your track plan out to where you can use the biggest curves you can fit in your space.

3 Plant, plant, plant. Don't wait to plant. As soon as you can, get plants in the ground so they can begin to fill in.

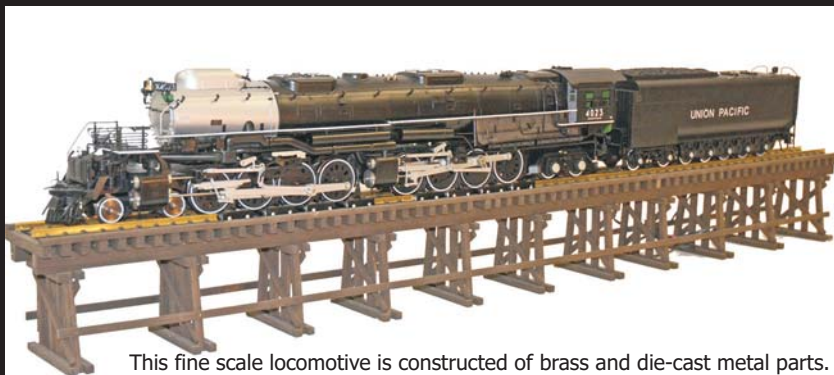

4 Access. You may want to plan some kind of shed to store some or all of your train items. You may even be lucky and be able to drive your trains right in to the basement or garage. Believe me, this is important. I just ran an 80 car freight train and I had to carry all those cars out to the railroad and back in.

5 Do what YOU want. Do I need to say more? It has been said many times 'It's your Garden Railroad, do what you want'. ENJOY!

Joe Fotschky
